Marmousi-II: full water-bearing model inputs

78 × 200 samples · 45 m grid · Gaussian initial model, σ = 150 m

★ Source, depth 0.54 km ▽ 41 receivers, depth 0.54 km ---- Seafloor, depth 0.45 km

ρ = 2450 kg/m³ everywhere in truth and initial, including water. No density update or inverted model is shown.

Source: University of Houston / AGL · Martin, Wiley & Marfurt. All 11 water rows retained; no Vs floor.
